Open science

Making science more accessible, inclusive and equitable for the benefit of all

Why Open Science?

The UNESCO Recommendation on Open Science provides the first internationally agreed definition of Open Science which is defined as an inclusive construct that combines various movements and practices, aiming to:

- make multilingual scientific knowledge openly available, accessible and reusable for everyone
- increase scientific collaborations and sharing of information for the benefits of science and society,
- open the processes of scientific knowledge creation, evaluation and communication to societal actors beyond the traditional scientific community.
