	<b>PSORIASIS AREA AND SEVERITY INDEX</b> <b>(PASI) WORKSHEET</b>

Psoriasis Area and Severity Index (PASI) is a quantitative rating score for measuring the severity of psoriatic lesions based on area coverage and plaque appearance.

Plaque characteristic	Lesion Score	Head	Upper Limbs	Trunk	Lower Limbs
<b>Erythema</b>	0 = None				
<b>Induration/Thickness</b>	1= Slight				
	2 = Moderate				
<b>Scaling</b>	3 = Severe				
	4 = Very Severe				
Add together each of the 3 scores for each body region to give 4 separate sums (A)					
<b>Lesion Score Sum (A)</b>					

Percentage area affected	Area Score	Head	Upper Limb	Trunk	Lower Limbs
<b>Area Score (B)</b> Degree of involvement as a percentage for each body region affected (score each region with score between 0-6)	0 = 0%				
	1 = 1-9%				
	2 = 10-29%				
	3 = 30 - 49%				
	4 = 50 - 69%				
	5 = 70 - 89%				
Multiply Lesion Score Sum (A) by Area Score (B), for each body region, to give 4 individual subtotals (C)					
<b>Subtotals (C)</b>					
Multiply each of the Subtotals (C) by amount of body surface area represented by that region, i.e. x 0.1 for head, x 0.2 for upper body, x 0.3 for trunk, and x 0.4 for lower limbs					
Body Surface Area		x0.1	x0.2	x0.3	x0.4
<b>Totals (D)</b>					
Add together each of the scores for each body region to give the final PASI Score					

**PASI SCORE =**
